### Woodpeckers® T-Squares

Drawing straight, accurate lines can be challenging when relying on a tape measure and a scrap-wood straight edge. Now there's a better way, the new Woodpeckers T-Square.

Whether working off a factory edge or not, the Woodpeckers T-Square will help you draw straighter, more accurate lines in less time than you might be used to. Each Woodpeckers T-Square consists of a precisely machined, laser engraved, aluminum blade perfectly fitted to a solid, billet handle with support steps to prevent tipping.

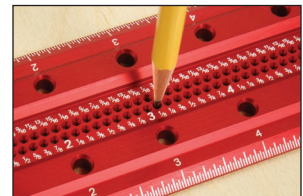

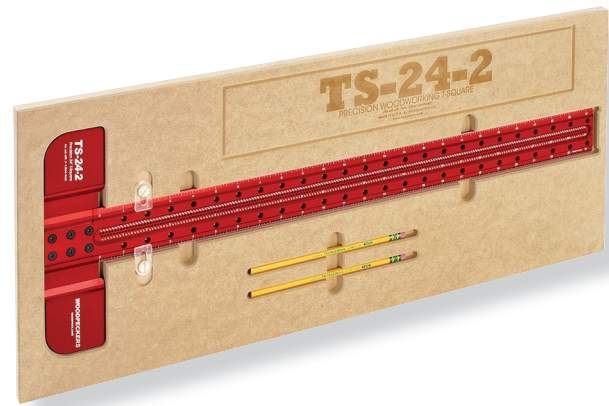

Both critical parts are fastened together with screws offset to create tension between the blade and handle for mechanical soundness.

The blade itself has precisely spaced 1mm holes machined every 1/16". These holes fit both standard and mechanical pencils. Blade edges are formed at a 30° bevel and engraved with precise inch scale markings graduated to 1/32". The beveled design reduces parallax and increases measuring and marking accuracy.

Three sizes are available 12", 24" and 32". The 12" size is ideal for work with solid lumber and furniture parts. The 24" and 32" are intended for cabinetry and sheet goods.

Like all Woodpeckers Precision Woodworking Tools, our T-Squares are made in the U.S.A.

### Woodpeckers® Story Stick

Even in today's high tech world of woodworking, some tried and true techniques are still hard to beat. Introducing the new Woodpeckers Story Stick. What's a story stick? It's essentially a customized yardstick with just the marks you need.

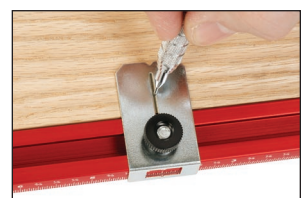

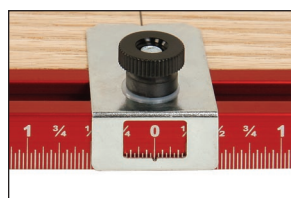

The Woodpeckers Story Stick takes this fundamentally useful tool and brings it into the 21st century.

With the Story Stick you can mark dozens of boards exactly the same. Slots in the steel tabs ensure that your marks are consistently on the money.

By combining accurately cut steel tabs with an engraved aluminum track and machined end stop, you'll have one of the best tools possible for repeatedly and accurately marking where you need to drill a hole, make a cut or install a shelf.

Each of the four tabs has a notched window that lines up to the scales on the sides of the stick. One side is engraved with a standard scale and the other a center scale. Four tabs and one end stop are included with each 36" Story Stick.

## PRECISION WOODWORKING TOOLS

### Woodpeckers® Precision Woodworking Square

Precise, accurate and meticulously machined. Those are the basics on Woodpeckers Precision 8" x 12" Woodworking Square. Every woodworker needs a square and every wood-working project relies on the quality of a square for the quality of the finished project.

One of the unique features of Woodpeckers Precision Woodworking Square is its construction. Both the blade and base are machined from a single plate of aircraft grade aluminum. This design results in a far higher degree of square then what's possible with the a two piece design.

Both handles are attached with stainless steel pins which brings the overall width of the base to ¾". With that much mass at the bottom, the square easily sits solid which allows for a hands-free check of cabinet parts.

Handling is further improved with a finger slot machined in the ¼" thick, 12" blade.

All the aluminum parts are anodized for surface durability. Scales are engraved on each side in 1/16" graduations.

Each square includes a fitted, wall mountable case for protection and accessibility. Made in U.S.A.

### Woodpeckers® Precision Triangles

When it comes to shape integrity, little can compare to a triangle. It's one of the most reliable shapes that can be used for constant, bullet proof inspection of 45° and 90° angles.

Three different Precision Triangles are available, 4", 6" and 12". Woodpeckers Precision Triangles are designed to fit the needs of cabinet and furniture makers alike.

Each triangle is machined from ¼" thick solid aircraft grade aluminum plate, buffed to a satin finish, anodized for durability and laser engraved with inch scales along the right angle legs and a center scale along the long leg. (1/16" scale graduations).

Control and handling is improved with the varied cutouts. The 4" and 6" are sold as a set, the 12" is sold separately. Includes fitted wall mountable wooden case.
