

Woodpeckers®
OneTIME Tool®
SSE | STEEL STRAIGHT EDGE
MAINTENANCE & STORAGE

Your new Steel Straight Edge has been precision ground to a very exacting tolerance. To maintain its tolerance of two ten-thousandths of an inch, it needs careful storage and maintenance.

Don't lean your Steel Straight Edge in storage. Always store it lying flat or hanging by the hole in the end.

Your Steel Straight Edge is NOT stainless steel and can rust in humid and/or dusty conditions. Periodically coat the tool with a lubricant. We recommend Boeshield T-9. Protect your Steel Straight Edge from dust accumulation by storing it in a drawer or closed cabinet.
